SUMMARY

Senior Technical Program Manager with 15+ years in designing scalable certification programs, AI-enabled learning and enablement solutions, and instructional design. Skilled in product development, stakeholder alignment, and building personalized learning experiences to drive engagement and efficiency.

EXPERIENCE

Principal Consultant

PopDigital

January 2014 – Present

- Defined upskilling strategy and technical skilling roadmaps for digital learning platforms in SaaS environment, conducting gap analysis and change impact assessments leveraging qualitative and quantitative data to identify learning needs and design short-form content strategies that democratized access to technical education for underserved learner communities, improving learner accessibility by 35%.
- Designed and managed IoT hackathon learning track for 1,000+ conference attendees, developing curriculum, real-world examples, guided labs, demos, and hands-on lab kits from hardware to web interfaces, ensuring accessibility and instructional quality standards while collaborating with subject matter experts (SMEs) and supporting innovation leadership.
- Drove customer enablement initiatives through multi-channel content activation and self-service learning experiences, creating job aids, guided labs, and on-demand training materials that improved customer onboarding efficiency and reduced support escalations while expanding technical education access to diverse learner audiences.
- Created diverse learning materials including job aids, chapter narratives, and interactive modules using HTML, JavaScript, and Web Services, tailored for Instructor-Led Training (ILT), On-Demand content, and self-service learning experiences.
- Designed and developed responsive web applications using React, TypeScript, NextJS, and Tailwind CSS for technical audiences, implementing component-based design systems and integrating GraphQL and RESTful APIs to deliver scalable, performant cloud solutions supporting learning platform infrastructure.
- Led Copilot and AI customer zero initiatives, integrating AI/ML capabilities (OpenAI, vector search) into frontend applications and activating content across social media channels and community engagement platforms, while implementing CI/CD pipelines via GitHub Actions with version control workflows, pull request automation, and release management that reduced web publishing tasks by 80%, demonstrating innovation leadership in multi-channel activation and Agile rapid development methodologies.
- Built high-performance web interfaces with optimization techniques including caching, lazy loading, and asset bundling, ensuring fast load times and seamless user experiences while collaborating with designers to implement pixel-perfect UI components supporting technical learning delivery.

Web Developer / Automation Engineer

Intuit

April 2025 – March 2026, Remote from Seattle, WA

- Define and execute a curriculum development strategy for learning automation transformation in a SaaS environment. Apply adult learning theory and competency modeling to establish scalable instructional design frameworks. Develop training effectiveness measurement processes. Implement Agile rapid development to create instructional content, improving technical proficiency across 50+ engineering team members by 40%. Mentor an 8-member cross-functional enablement team on best practices for creating Instructor-Led Training (ILT) and On-Demand content.
- Lead instructional design and curriculum development for enterprise AI learning transformation, conducting learner needs analysis and stakeholder collaboration to create engaging training for Generative AI and Agentic AI using HTML, JavaScript, and Web Services customization, achieving 30% improvement in content discoverability and 25% increase in learner satisfaction while conducting quality assurance (QA) testing of learning experiences to ensure content accuracy, functionality, and adherence to quality standards.
- Designed and launched role-based certification program for AI technologies, developing Product Requirements Documents (PRDs) and Business Requirements Documents (BRDs) to define scalable certification requirements and stakeholder alignment strategies that enabled 50+ engineers to validate skills and achieve standardized competencies, improving onboarding efficiency by 30% through structured skill validation frameworks.
- Produced 20+ short-form video modules and interactive simulators using Articulate 360 (Rise, Storyline), Camtasia, and SnagIt, translating complex AI concepts into simple storytelling for broad-scale consumption, achieving 25% increase in learner satisfaction across business and technical user personas while creating diverse learning materials including job aids and chapter narratives tailored for self-service and virtual instructor-led training (VILT).
- Built and mentored cross-functional team coordinating with learning designers and engineers to deliver digital transformation outcomes, establishing best practices and toolkit of 15+ templates for adoption KPIs and success measurement using business performance metrics to track learner insights and program effectiveness.
- Developed 20+ end-to-end automation solutions using Python, API integrations, and CI/CD pipelines, creating dashboards for tracking learning metrics and certification completion rates, leading to 60% improvements in task efficiency and front-end consistency across multiple business units while applying system thinker approach to connect technology and learning processes within software delivery lifecycle.

Volunteer

Entrepreneurs of Tomorrow

August 2024 – February 2025, Remote, New York, NY

- Created comprehensive e-learning modules for nonprofit organizations utilizing adult learning theory principles, boosting learner engagement by 25% and expanding access to underserved communities through content authoring tools such as ADAPT while ensuring quality control and stakeholder alignment.
- Built automations between Google Forms and the broader Google Workspace using Python scripting, reducing double typing by 30%.
- Developed micro-learning modules and blended learning experiences, increasing engagement rates by 20% among participants and contributing to a structured learning path, and integrated ADAPT framework with Softr, utilizing a common CSS template and interaction model.

Technical Enablement and Automation Engineer

Palo Alto Networks

September 2022 – November 2023, Santa Clara, CA

- Designed and launched AI-powered assessment system for software releases, developing automated certification tracking and validation processes using Python scripts that reduced first-time pass rates by 30% while collaborating with technical subject matter experts to ensure quality control and stakeholder alignment across global development teams.
- Built certification tracking dashboards using Python and learning analytics, implementing data-driven quality control processes to monitor training engagement, course completion, and skill validation metrics, increasing efficiency by 30% over 18 months through cross-functional collaboration to identify and resolve complex technical challenges.
- Led strategic planning efforts to improve processes across various areas by integrating AI tools, automating software releases, and implementing solutions to enhance team performance and technical skills.
- Directed technology evangelism initiatives by launching pilot program of workshops and video-based training over 12 months, writing strategic documentation and Product Requirements Documents (PRDs) that influenced developers' adoption of cutting-edge tools and achieved 40% increase in engagement and knowledge transfer across global teams spanning North America, EMEA, and APAC regions.

Technical Instructional Designer

GITLAB

June 2021 – December 2022, Remote, San Francisco, CA

- Designed performance-based virtual instructor-led training (VILT) and asynchronous courses using Articulate 360 (Rise 360, Storyline) and LMS platforms, applying human-centered design and learning needs analysis to create CI/CD curriculum for partner-facing and customer-facing technical roles including DevOps engineers and Solution Architects, resulting in 40% increase in completion rates and 60% more hands-on lab engagements.
- Established scalable program management framework including curriculum mapping, vendor coordination, modular course architecture, and Product Requirements Documents (PRDs) for assessment systems, enabling 30% faster curriculum updates and systematic content alignment while creating comprehensive toolkit of templates and implementation methodologies that improved pedagogical consistency across CI/CD training programs and drove strategic planning and cross-functional stakeholder alignment.
- Leveraged content authoring tools including Articulate 360 (Rise 360, Storyline) and PowerPoint to design and format professional learning content, ensuring brand consistency, quality control standards, and visual appeal across multiple course offerings while streamlining content creation and delivery processes.
- Crafted deployment pipelines and developer-facing documentation in Python and Node, utilizing Gitlab CI/CD, for assessment generation and technical enablement workflows.
- Supported technical challenges and innovation events by creating instructional content, guided learning paths, and hands-on lab materials that enabled engineers to rapidly prototype and experiment with CI/CD workflows.

Owner/Operator

Crack'd

May 2020 – May 2021, Oakland, CA

- Established and operated ghost kitchen serving halal meals to midnight epicurean audience in Oakland, CA, managing full-cycle operations from vendor sourcing to customer fulfillment.
- Developed menu optimization strategy based on customer feedback and sales data, increasing repeat customer rate by 35% within 6 months.
- Managed inventory, food safety compliance, and quality control processes, maintaining 98% positive customer satisfaction rating across 500+ orders.

Lead Learning Experience Designer

SAP Concur

February 2019 – February 2020, Bellevue, WA

- Designed and implemented instructor-led e-learning curriculum and certification programs for 500+ employees using Articulate 360 (Storyline) and Adobe Captivate, developing course storyboards with learning objectives, content flow, interaction design, and knowledge assessments while writing Business Requirements Documents (BRDs) to define scalable certification program requirements and ensure strategic alignment with organizational learning objectives, incorporating gamification elements such as badges and achievement tracking to boost course completion rates by 30% and improve learner satisfaction scores by 25% across diverse learning modules.
- Conducted stakeholder needs analysis sessions to optimize change management campaigns and ensure stakeholder alignment, reducing development times by 20% while increasing deployment success of xAPI-compatible learning modules through quality control processes and cross-functional collaboration.
- Developed localization-friendly content and multimedia elements, leveraging Learning Management Systems (LMS) to enhance engagement and retention by 35% while ensuring accessibility standards compliance.

Conversational AI chatbot for just-in-time learning

PopDigital

- Managed end-to-end AI learning program including curriculum design, vendor partnerships, and impact measurement for 150+ engineering participants across 3 cohorts, developing Product Requirements Documents (PRDs) and pilot program frameworks while coordinating with 8 SMEs to deliver 5-day bootcamp with 20+ hours of instructional content covering conversational AI technologies and achieving 95% completion rate and 88% satisfaction score through quality control processes and stakeholder alignment.
- Directed program operations including attendance tracking, engagement metrics analysis, certification tracking, and learning outcome measurement leveraging qualitative and quantitative data while coordinating regional stakeholder partnerships and budget allocation for hands-on lab materials and technical resources.
- Executed curriculum strategy aligned with strategic technical skilling objectives, creating scalable program framework with modular content architecture, role-based skill validation, and feedback-driven iterations that enabled Support Engineers and Delivery Partners to build proficiency in AI technologies, achieving 45% increase in technical skill adoption across global teams.

Machine learning text prediction for content creation

Webinar: 'Why your pip install is riskier than your Tinder date'

GenAI-powered adaptive learning platform (OpenAI integration)

Palo Alto Networks

- Engineered AI-powered adaptive learning platform for technical training using React, TypeScript, and OpenAI integration, implementing Python-based API integrations, dashboard analytics, and hands-on labs that tailored learning experiences to individual engineer needs and supported experimentation with emerging technologies, achieving 25% improvement in learner engagement.
- Built 12+ shared component libraries following modern design system principles, reducing development time by 35% while integrating advanced analytics and machine learning algorithms for personalized learning recommendations to continuously assess student progress across 500+ active learners, implementing certification tracking features and skill validation metrics.
- Implemented scalable architecture supporting 10,000+ concurrent users with 99.9% uptime, facilitating seamless OpenAI integration through Python scripting and quality control processes, ensuring consistent performance across 20+ educational modules with optimized rendering strategies achieving 40% faster load times.

EDUCATION

MA, Education with Instructional Technologies

San Francisco State University

BA, Anthropology, minor in Computer Information Systems

San Francisco State University

CERTIFICATIONS

Actively Pursuing: Project Management Professional (PMP) and CompTIA Security+ certifications (Expected 2026)

Cisco Networking Academy - Networking Basics

Cisco

SKILLS

Core Frontend & Dashboard Development: Python, TypeScript, React, NextJS, JavaScript, HTML, CSS, Tailwind CSS, dashboard development, data visualization, certification tracking systems, metrics tracking, component-based design systems, responsive web interfaces | API & State Management: GraphQL, React-Query, RESTful APIs, API integrations, data fetching libraries | UI/UX Tools: Figma, responsive design, accessibility standards (WCAG, Section 508) | Build & CI/CD: GitHub Actions, GitLab CI/CD, CI/CD pipelines, DevOps, Git, modern frontend build tools, BiomeJS | Backend & Cloud: Node.js, Python, AWS, GCP, Azure, Kubernetes, Docker, Terraform, containerization, serverless architectures, Lambda, cloud solutions | Microsoft Technologies: Azure, Microsoft 365, Teams, Power Platform, Microsoft PowerPoint, Copilot, Microsoft ecosystem tools | Data & Performance: Vector databases, distributed databases, web performance optimization, caching strategies, rendering strategies, asset bundling | Monitoring & Analytics: DataDog, Sentry, A/B testing frameworks, Google Analytics, Google Tag Manager | AI/ML Integration: Machine learning models, personalized learning recommendations, AI development tools, AI learning programs, GenAI (OpenAI, Claude), AI/ML in frontend applications, AI-powered assessments, predictive analytics, AI transformation, Copilot integration | Mobile: Expo, React Native | Security & Compliance: Security compliance in learning content, accessibility compliance | Other: Ruby, content management systems

eLearning Authoring & Multimedia Tools: Articulate 360 (Rise 360, Storyline), Adobe Captivate, Camtasia, SnagIt, ScreenFlow, Adobe Premier, Adobe Illustrator, multimedia design, graphics creation, templates & icons, video production, interactive modules, simulators | Business & Collaboration: Microsoft Office Suite (Excel, PowerPoint, Outlook, Word), Smartsheet, Learning Management Systems (LMS), Google Workspace, Zoom, project management tools

Certification & Product Development: Certification design, certification program development, certification tracking systems, Product Requirements Documents (PRDs), Business Requirements Documents (BRDs), strategic documentation, strategic planning, quality control processes, stakeholder alignment, pilot program management, role-based frameworks, skill validation systems, certification tracking metrics, cross-functional collaboration, scalable product development

Change Management & Enablement: Prosci ADKAR, change impact assessments, stakeholder analysis & segmentation, enablement roadmaps, adoption measurement, adoption KPIs, design thinking facilitation, lean principles, Agile/waterfall/hybrid delivery models, rapid development, change campaigns, behavioral change strategies, risk mitigation, qualitative & quantitative metrics, thought leadership, influence & consulting

Instructional Design & Learning Strategy: Human-centered design, information architect, user experience architect, scalable instructional design process, iterative methodology, course storyboards, certification programs, corporate education life cycle, adult learning principles, evaluation strategies, performance standards development, business impact measurement, virtual instructor-led training (VILT), micro-learning, blended learning, e-learning, asynchronous learning, program attendance tracking, engagement metrics & outcomes measurement, hackathon facilitation, bootcamp design & delivery, technical challenge coordination, hands-on labs & demos, SME partnership & collaboration, innovation event support, prototyping & experimentation enablement, workshop delivery, technical training programs, Prompt Engineering, Learning Needs Analysis

Skills: Innovative Thinker, Problem Solver, Problem-Solving, Ownership Mentality, Collaborative Approach, Team Collaboration, Communication, Resilience, Adaptability, Leadership, Stakeholder Management, Pragmatic Decision-Making, Strategic Thinking, Analytical Skills, Instructional Delivery, Customer Engagement
